PYTHON DEVELOPER

Python Developer with hands-on experience building **machine learning models from scratch**, **backend systems using Django, Flask, and FastAPI**, and **full-stack web applications**. Strong foundation in data processing, APIs, databases, and clean Git-based workflows. Passionate about writing maintainable code and learning system-level engineering.

TECHNICAL SKILLS

Languages:

Python, JavaScript, TypeScript, PHP

Backend & APIs:

Django, Flask, FastAPI, Node.js, Express.js, REST APIs, API Integration

Frontend:

HTML, CSS, Bootstrap, Tailwind CSS, React.js, Redux

Data & ML:

NumPy, Pandas, Matplotlib, Linear Regression

Databases:

MySQL, PostgreSQL, SQLite

Tools & DevOps:

Git, GitHub, VS Code, Postman, Deployment & Hosting

PROJECTS

Student Performance Predictor (Machine Learning)

- Built an end-to-end **machine learning pipeline from scratch** without using high-level ML libraries.
- Implemented **linear regression using NumPy**, including cost function, gradient descent, and evaluation metrics.
- Performed **data preprocessing, feature normalization, and exploratory data analysis** using Pandas and Matplotlib.
- Structured code for clarity, reusability, and version control with Git.

Tech: Python, NumPy, Pandas, Matplotlib, Git

House Price Predictor

- Developed a **regression-based ML model** to predict house prices using real-world Kaggle dataset.
- Handled missing values, feature selection, and data scaling manually.
- Visualized feature relationships and model performance using Matplotlib.
- Followed a **step-by-step ML workflow** with clear experimentation and commits.

Tech: Python, Pandas, NumPy, Matplotlib

ReadForge (Django Web Application)

- Designed and developed a **full-stack Django application** with authentication and database integration.
- Implemented CRUD operations, user sessions, and responsive UI.
- Used Django ORM with relational databases for efficient data handling.
- Followed clean project structure and Git-based development.

Tech: Django, Python, ReactJS + Redux

BudgetIQ (Personal Finance Management System)

- Developed a **budget tracking and expense management system** to help users monitor income and spending.
- Implemented features for **expense categorization, monthly summaries, and insights**.
- Designed REST-style backend logic and integrated frontend components.
- Focused on data accuracy, validation, and scalable backend structure.

Tech: Python, Django, SQLite, React

EDUCATION

Bachelor's Degree (Computer Engineering)

[Government Engineering College, Gandhinagar], Gujarat

[Year – 2025]

ADDITIONAL HIGHLIGHTS

- Strong understanding of **backend architecture and API-driven systems**
- Experience working with **real datasets and production-like projects**
- Comfortable with **GitHub workflows and clean commit practices**
- Actively building projects and improving system design skills
